<tr>
<td>Solve real-life and mathematical problems using numerical and algebraic expressions and equations.</td>
<td>MCC7.EE.3 Solve multi-step real-life and mathematical problems posed with positive and negative rational numbers in any form (whole numbers, fractions, and decimals), using tools strategically. Apply properties of operations as strategies to calculate with numbers in any form; convert between forms as appropriate; and assess the reasonableness of answers using mental computation and estimation strategies. For example: If a woman making $25 an hour gets a 10% raise, she will make an additional 1/10 of her salary an hour, or $2.50, for a new salary of $27.50. If you want to place a towel bar 9 3/4 inches long in the center of a door that is 27 1/2 inches wide, you will need to place the bar about 9 inches from each edge; this estimate can be used as a check on the exact computation.</td>
<td>SE: Variables and Patterns, Investigation 2: 31-47; Investigation 3: 49-62; Investigation 4: 64-79; Accentuate the Negative, Investigation 1: 8-20; Investigation 2: 22-40; Investigation 3: 44-58; Investigation 4: 60-74, 76-77; Moving Straight Ahead, Investigation 1: 5-22; Investigation 2: 24-44; Investigation 3: 47-68; Investigation 4: 70-88</td>
</tr>
<tr>
<td>MCC7.EE.4 Use variables to represent quantities in a real-world or mathematical problem, and construct simple equations and inequalities to solve problems by reasoning about the quantities.</td>

</thead>
</table>
| MCC7.SP.4             | Use measures of center and measures of variability for numerical data from random samples to draw informal comparative inferences about two populations. For example, decide whether the words in a chapter of a seventh-grade science book are generally longer than the words in a chapter of a fourth-grade science book. | SE: Data Distributions, Investigation 3: 55-72; Investigation 4: 74-84  
TE: Data Distributions, Investigation 3: 74-92; Investigation 4: 99-114 |
| MCC7.SP.5             | Understand that the probability of a chance event is a number between 0 and 1 that expresses the likelihood of the event occurring. Larger numbers indicate greater likelihood. A probability near 0 indicates an unlikely event, a probability around 1/2 indicates an event that is neither unlikely nor likely, and a probability near 1 indicates a likely event. | SE: What Do You Expect?, Investigation 1: 6-9, 14-17; Investigation 4: 51-53  
| MCC7.SP.6             | Approximate the probability of a chance event by collecting data on the chance process that produces it and observing its long-run relative frequency, and predict the approximate relative frequency given the probability. For example, when rolling a number cube 600 times, predict that a 3 or 6 would be rolled roughly 200 times, but probably not exactly 200 times. | SE: What Do You Expect?, Investigation 1: 6-18; Investigation 2: 22-36; Investigation 3: 38-48; Investigation 4: 51-60

| MCC7.SP.7                 | Develop a probability model and use it to find probabilities of events. Compare probabilities from a model to observed frequencies; if the agreement is not good, explain possible sources of the discrepancy. | **SE:** What Do You Expect?, Investigation 1: 6-18; Investigation 2: 22-36; Investigation 3: 38-48; Investigation 4: 51-60  
**TE:** What Do You Expect?, Investigation 1: 18-32; Investigation 2: 38-54; Investigation 3: 60-72; Investigation 4: 79-90 |
| MCC7.SP.7a                | Develop a uniform probability model by assigning equal probability to all outcomes, and use the model to determine probabilities of events. For example, if a student is selected at random from a class, find the probability that Jane will be selected and the probability that a girl will be selected. | **SE:** What Do You Expect?, Investigation 1: 6-18; Investigation 2: 22-36; Investigation 3: 38-48; Investigation 4: 51-60  
**TE:** What Do You Expect?, Investigation 1: 18-32; Investigation 2: 38-54; Investigation 3: 60-72; Investigation 4: 79-90 |
| MCC7.SP.7b                | Develop a probability model (which may not be uniform) by observing frequencies in data generated from a chance process. For example, find the approximate probability that a spinning penny will land heads up or that a tossed paper cup will land open-end down. Do the outcomes for the spinning penny appear to be equally likely based on the observed frequencies? | **SE:** What Do You Expect?, Investigation 1: 6-18; Investigation 2: 22-36; Investigation 3: 38-48; Investigation 4: 51-60  
**TE:** What Do You Expect?, Investigation 1: 18-32; Investigation 2: 38-54; Investigation 3: 60-72; Investigation 4: 79-90 |
**TE:** What Do You Expect?, Investigation 1: 18-32; Investigation 2: 38-54; Investigation 3: 60-72; Investigation 4: 79-90 |
| MCC7.SP.8a                | Understand that, just as with simple events, the probability of a compound event is the fraction of outcomes in the sample space for which the compound event occurs. | **SE:** What Do You Expect?, Investigation 1: 6-18; Investigation 2: 21-36; Investigation 3: 38-48; Investigation 4: 51-60  
**TE:** What Do You Expect?, Investigation 1: 18-32; Investigation 2: 38-54; Investigation 3: 60-72; Investigation 4: 79-90 |

| MCC7.SP.8b             | Represent sample spaces for compound events using methods such as organized lists, tables and tree diagrams. For an event described in everyday language (e.g., "rolling double sixes"), identify the outcomes in the sample space which compose the event. | SE: What Do You Expect?, Investigation 1: 7-8, 10-18; Investigation 2: 27-31; Investigation 4: 55-58; Unit Review: 63-65  
TE: What Do You Expect?, Investigation 1: 23-26, 32; Investigation 2: 54; Investigation 4: 90; Unit Review: 104 |
| MCC7.SP.8c             | Design and use a simulation to generate frequencies for compound events. For example, use random digits as a simulation tool to approximate the answer to the question: If 40% of donors have type A blood, what is the probability that it will take at least 4 donors to find one with type A blood? | SE: What Do You Expect?, Investigation 2: 20-21, 24-25; Investigation 3: 38-48
