MasteringPhysics®

Designed with the single purpose of helping your students reach more moments of true understanding that lead to better results.

MasteringPhysics™ is the most advanced, most widely used online chemistry tutorial and homework program available. MasteringPhysics™, with Pearson eText, utilizes the Socratic method to coach students through problem-solving techniques, offering hints and simpler questions on request to help students learn, not just practice. Tutorials guide students through the most challenging chemistry topics and help them make connections. The Mastering system helps teachers maximize class time with easy-to-assign, customizable, and automatically graded assessments that motivate students to learn.

The Pearson eText gives students access to the text whenever and wherever they can access the Internet. The eText can be viewed on PCs, Macs, and tablets, including iPad® and Android®.

TRY IT TODAY!
Teachers, register for preview access today at PearsonSchool.com/access_request. Select Science Initial Access, and complete the form under Option 2. Teacher preview code will be delivered via email.

Pearson Physics

1st Edition ©2014 Walker

with MasteringPhysics with Pearson eText
Pearson Physics emphasizes the fact that physics applies to everything in your world, connecting ideas and concepts to everyday experience. Physics & You (1) features throughout the book explain the physics behind interesting technologies, the impact of technology on society, and the role of physics in various careers. Physics & You: Technology (2) passages in the discussion explain how various modern technologies make use of the physics concepts just learned.

The Big Idea (1) emphasizes the central concept of the chapter. Key Questions (2) in each lesson call out important concepts and highlight their answers in the discussion.

Quick Examples offer simple and concise solutions that model how newly introduced equations and units are used.

Active Examples ask students to take an active role in solving the problem by thinking through the logic described on the left and verifying their answers on the right.

Conceptual Examples pose a thought-provoking question and then explain the logical reasoning and physics concepts needed to answer it.

Guided Examples present a visual model of the physical situation and outline the key concepts that apply to it before proceeding to the detailed step-by-step solution.

In-text Labs and Study Tools
Pearson Physics provides hands-on lab explorations in the text itself and through a separate Lab Manual. Extra study support features appear throughout the chapters when students need them most.

Physics Labs are traditional single-page lab activities that use easy to obtain materials.

Math HELP boxes in example problems guide students to extra math support material contained in the Math Review chapter.

Connecting Ideas feature the important concepts from lesson to lesson and chapter to chapter, helping students see the bigger picture.
