Strands

Business Content Standards, Curriculum Framework, Bulletin 1977, identified seven strands. Strands are concepts common to all business courses and should be incorporated as content in all business courses. These strands are:

Career Development — Students need to explore multiple career paths and continuously deal with the process of learning new skills. Career development includes self-awareness, career research, workplace expectations, career strategies, school-to-work transitions, and lifelong learning.

1. Assess personal strengths and weaknesses as they relate to career exploration and development.
2. Utilize career resources to develop an information base on content related careers including international occupational opportunities.
3. Relate work ethic, workplace relationships, diversity, and communication skills to career development.
4. Apply knowledge gained from individual assessment to a comprehensive set of goals and an individual career plan that develops strategies to make an effective transition from school to work and includes the importance of lifelong learning to career success.
5. Discuss specific qualifications and characteristics necessary for a career in a content-related field.

Communication — Communication in all forms is a foundation skill for all business courses. Communicating clearly, fluently, strategically, technologically, critically, and creatively in society and in a variety of workplaces using reading, writing, speaking, and listening skills is an essential career and life skill.

1. Communicate in a clear, courteous, concise, and correct manner on personal and professional levels.
2. Apply basic social communication skills in personal and professional situations.
3. Use technology to enhance the effectiveness of communications.
4. Integrate all forms of communication in the successful pursuit of a career.
5. Incorporate appropriate leadership and supervision techniques, customer-service strategies, and standards of personal ethics to communicate effectively with various business constituencies.

Computation — Business education courses offer unique opportunities for students to apply computational and problem-solving skills in everyday business, personal, and consumer problems.

1. Apply mathematical operations using whole numbers, decimals, fractions, percents, ratios, and proportions to solve problems.
2. Use common international standards of measurement in solving problems.
3. Analyze and interpret data using common statistical procedures.
4. Use mathematical procedures to analyze and solve business problems for such areas as taxation, savings and investment, payroll records, cash management, financial statements, credit management, purchases, sales, inventory records, depreciation, cost recovery, and depletion.

**International Business** — Since business is conducted in a local, state, national, and international marketplace, students must understand how social, cultural, political, legal, and economic factors impact the business environment.

1. Explain the role of international business and analyze its impact on careers and doing business at the local, state, national, and international levels.
2. Apply communication strategies necessary and appropriate for effective and profitable international business relations.
3. Describe the social, cultural, political, legal, and economic factors that shape and impact the international business environment.
4. Describe the environmental factors that define what is considered ethical business behavior.
5. Explain the role, importance, and concepts of international finance and risk management.
6. Discuss special challenges in the operations and management of human resources in international business.
7. Apply marketing concepts to international business.
8. Relate balance of trade concepts to the import/export process.
9. Identify forms of business ownership and entrepreneurial opportunities available in international business.

**Interrelationships of Business and Academics** — A major component of developing a sound understanding of the modern business environment is identifying the interrelationships of business and academic skills and knowledge.

1. Analyze the interrelationships of a particular course being studied with various business content areas such as accounting, administrative support, business administration and management, economics and finance, information systems, and marketing.
2. Participate in activities that interrelate the course being studied to other business content areas to enhance general business understanding.
3. Apply knowledge and skills gained in academic courses such as English, mathematics, science, and social studies to problem solving in business education courses.
4. Participate in projects integrating academic and business skills and knowledge.

**Technology** — Technology is advancing at a tremendous rate. It is necessary for students to develop an understanding of the current technology available and use that knowledge in decision-making and problem-solving processes.

Louisiana Model Course Guidelines – Web Design

1. Choose appropriate procedures and equipment to complete a task or job.
2. Use the appropriate procedures for setup and operation of equipment.
3. Prevent, identify, or solve problems with equipment.
4. Research and analyze factors involved in obtaining appropriate technology.

Work Ethics and Professionalism — A high-performance workplace requires employees who demonstrate proper workplace behavior, personal attributes, and a high level of interpersonal skills.

1. Demonstrate dependability and punctuality.
2. Display initiative, enthusiasm, and a positive attitude.
3. Demonstrate good customer relations skills.
4. Operate within the scope of authority adhering to established company rules, regulations, and policies.
5. Abide by the standard dress code of the workplace.
6. Develop and adhere to appropriate interactive relationships for effective teamwork.
7. Learn to accept praise and criticism in a positive manner.
8. Accept responsibility for one's own decisions and actions.
9. Maintain and enhance skills through participation in inservice or continuing education.
Web Design
Content Guideline

(The student will be able to . . .)

Unit One
Introduction and Basics

1. Identify the software used and to discriminate between other software programs that may or may not be used in the classroom.
2. Understand HTML, XML, web browsers, URLs, and bandwidth.
3. Understand and design for most browsers, including state-of-the art browsers.
4. Understand web design principles.
   a. designing for the medium
   b. designing the whole site
   c. designing for the user
   d. understand viewing patterns
   e. designing for the screen
   f. linking with hypertext
   g. restricting the amount of information

Unit Two
Plan the Site

1. Identify the basic elements of the web page.
2. Create the site specification.
3. Identify the content goal.
4. Understand filenames.
5. Understand URLs.
6. Understand directory structure.
7. Diagram the site.

Unit Three
Site Navigation

1. Understand navigation principles.
2. Understand and create text-based navigation.
3. Link with text-based navigation bar, document fragments, and external document fragments.
4. Add contextual links, hyperlinks.
5. Use and create graphics-based navigation.
6. Understand and use Flash navigation.
Unit Four
Tables and Forms

1. Understand and define table basics.
2. Define and use table attributes.
3. Use design rules.
4. Create basic page template.
5. Create page banners and feature cells.
6. Understand and create tables with varying widths, spacing, columns, and cells.
7. Understand, create, and use forms.

Unit Five
HTML Frames

1. Understand frames and work with frame syntax.
2. Plan for
   a. resizing and control scroll bars
   b. borders and margins
   c. screen resolution
3. Mix fixed and variable frames.

Unit Six
Typography, Graphics, and Color

1. Explore and identify type design principles.
2. Control typography with <FONT> and CSS.
3. Work with style sheets.
4. Understand CSS properties and style with CSS.
5. Specify font values and block-level space values.
6. Understand and use file format basics.
7. Identify, understand, and use the basic principles of color.
8. Choose a graphics tool (ie., Photocopy, Paintshop, etc.).
9. Use the <IMG> element.
10. Understand, create, and use digital photography.
11. Specify width and height, alignment, white space, and background images.
12. Use transparent space GIFs and single-pixel rules.

Unit Seven
Publish and Maintain the Site

1. Choose an ISP.
2. Use the file transfer protocol to upload files and a popular software program's uploading feature (ie., FrontPage or Microsoft's Word or PowerPoint).
3. Test the site.
4. Conduct user testing, refine, and update the content.
5. Work with search engines.
