INTRODUCTION

This document demonstrates how **Pearson Chemistry ©2017** meets Ohio's New Learning Standards for Science, 2011, Chemistry, Grades 9-12. Science Inquiry and Application references are to the Student and Teacher Edition feature and page levels. Course content references are to the chapter and section levels.

Pearson Chemistry combines proven and tested content with cutting-edge digital support and hands-on learning opportunities. This program provides you with everything you need to engage and motivate your students, as well as the tools to support the varied types of learners in your classroom.

The program is designed to connect curriculum, instruction, and assessment to the "Big Ideas" of chemistry that develops deep understanding.

Pearson Chemistry provides all of the problem-solving and math support that students need to be successful in the course, with ample opportunity for practice both in the Student Edition and in the program's digital resources.

Pearson Chemistry helps you meet the unique learning styles of each student in your classroom with a variety of resources. A variety of assessment opportunities helps you monitor student progress ensure student success on high-stakes tests.

Pearsonchem.com provides cutting-edge digital content that engages students and teachers – anytime, anywhere, with numerous practice opportunities and visual support, including interactive art and animations. Online tutors step students through chemistry and math problems, expanding learning beyond the classroom.

COURSE DESCRIPTION	
<p>Chemistry is a high school level course, which satisfies the Ohio Core science graduation requirements of Ohio Revised Code Section 3313.603. This section of Ohio law requires a three-unit course with inquiry-based laboratory experience that engages students in asking valid scientific questions and gathering and analyzing information.</p> <p>This course introduces students to key concepts and theories that provide a foundation for further study in other sciences as well as advanced science disciplines. Chemistry comprises a systematic study of the predictive physical interactions of matter and subsequent events that occur in the natural world. The study of matter through the exploration of classification, its structure and its interactions is how this course is organized.</p> <p>Investigations are used to understand and explain the behavior of matter in a variety of inquiry and design scenarios that incorporate scientific reasoning, analysis, communication skills and real-world applications. An understanding of leading theories and how they have informed current knowledge prepares students with higher order cognitive capabilities of evaluation, prediction and application.</p>	
SCIENCE INQUIRY AND APPLICATION	
<p>During the years of grades 9 through 12, all students must use the following scientific processes with appropriate laboratory safety techniques to construct their knowledge and understanding in all science content areas:</p>	
<ul style="list-style-type: none"> • Identify questions and concepts that guide scientific investigations; 	<p>This process is met throughout the program. Please find representative pages: SE/TE: Quick Lab, Observe: p. 17; Quick Lab, Analyze: p. 39; Small-Scale Lab, Analyze: p. 51; Quick Lab, Analyze And Conclude: p. 109; Small-Scale Lab, Analyze Data: p. 120; Quick Lab, Analyze And Conclude: p. 142; Quick Lab, Analyze And Conclude: p. 180; Quick Lab, Analyze And Conclude: p. 354; Small-Scale Lab, Analyze: p. 374; Small-Scale Lab, Analyze: p. 475 Plan and Carry Out an Investigation: p. 907</p>
