<p align="center"><b>Pearson High School Mathematics Common Core Algebra 2, ©2015</b></p>	<p align="center"><b>Minnesota Mathematics K-12 Academic Standards</b></p>
<p><b>Chapter 1</b></p>	
<p>1-1: Patterns and Expressions</p>	<p><b>6.2.1</b> Recognize and represent relationships between varying quantities; translate from one representation to another; use patterns, tables, graphs and rules to solve real-world and mathematical problems.</p> <p><b>5.2.1.1</b> Create and use rules, tables, spreadsheets and graphs to describe patterns of change and solve problems.</p> <p><b>4.2.1.1</b> Create and use input-output rules involving addition, subtraction, multiplication and division to solve problems in various contexts. Record the inputs and outputs in a chart or table.</p>
<p>1-2: Properties of Real Numbers</p>	<p><b>9.2.3.7</b> Justify steps in generating equivalent expressions by identifying the properties used. Use substitution to check the equality of expressions for some particular values of the variables; recognize that checking with substitution does not guarantee equality of expressions for all values of the variables.</p> <p><b>9.2.4.3</b> Recognize that to solve certain equations, number systems need to be extended from whole numbers to integers, from integers to rational numbers, from rational numbers to real numbers, and from real numbers to complex numbers. In particular, non-real complex numbers are needed to solve some quadratic equations with real coefficients.</p> <p><b>8.1.1</b> Read, write, compare, classify and represent real numbers, and use them to solve problems in various contexts.</p>

**An Alignment of the Minnesota Academic Standards for Mathematics 2007  
to Pearson High School Mathematics – Algebra 2 Common Core**

<p align="center"><b>Pearson High School Mathematics Common Core Algebra 2, ©2015</b></p>	<p align="center"><b>Minnesota Mathematics K-12 Academic Standards</b></p>
<p>(Continued) 1-2: Properties of Real Numbers</p>	<p><b>8.2.3.2</b> Justify steps in generating equivalent expressions by identifying the properties used, including the properties of algebra. Properties include the associative, commutative and distributive laws, and the order of operations, including grouping symbols.</p> <p><b>7.2.3.1</b> Use properties of algebra to generate equivalent numerical and algebraic expressions containing rational numbers, grouping symbols and whole number exponents. Properties of algebra include associative, commutative and distributive laws.</p> <p><b>6.2.2.1</b> Apply the associative, commutative and distributive properties and order of operations to generate equivalent expressions and to solve problems involving positive rational numbers.</p> <p><b>5.2.2.1</b> Apply the commutative, associative and distributive properties and order of operations to generate equivalent numerical expressions and to solve problems involving whole numbers.</p>
<p>1-3: Algebraic Expressions</p>	<p><b>9.2.3.1</b> Evaluate polynomial and rational expressions and expressions containing radicals and absolute values at specified points in their domains.</p> <p><b>9.2.3.6</b> Apply the properties of positive and negative rational exponents to generate equivalent algebraic expressions, including those involving nth roots.</p> <p><b>9.2.3.7</b> Justify steps in generating equivalent expressions by identifying the properties used. Use substitution to check the equality of expressions for some particular values of the variables; recognize that checking with substitution does not guarantee equality of expressions for all values of the variables.</p>

to Pearson High School Mathematics – Algebra 2 Common Core**

<p align="center"><b>Pearson High School Mathematics Common Core Algebra 2, ©2015</b></p>	<p align="center"><b>Minnesota Mathematics K-12 Academic Standards</b></p>
<p>(Continued) 1-3: Algebraic Expressions</p>	<p><b>8.2.3.1</b> Evaluate algebraic expressions, including expressions containing radicals and absolute values, at specified values of their variables.</p> <p><b>8.2.3.2</b> Justify steps in generating equivalent expressions by identifying the properties used, including the properties of algebra. Properties include the associative, commutative and distributive laws, and the order of operations, including grouping symbols.</p> <p><b>7.2.3.1</b> Use properties of algebra to generate equivalent numerical and algebraic expressions containing rational numbers, grouping symbols and whole number exponents. Properties of algebra include associative, commutative and distributive laws.</p> <p><b>7.2.3.2</b> Evaluate algebraic expressions containing rational numbers and whole number exponents at specified values of their variables.</p>
<p>1-4: Solving Equations</p>	<p><b>8.2.4.2</b> Solve multi-step equations in one variable. Solve for one variable in a multi-variable equation in terms of the other variables. Justify the steps by identifying the properties of equalities used.</p> <p><b>7.2.4.1</b> Represent relationships in various contexts with equations involving variables and positive and negative rational numbers. Use the properties of equality to solve for the value of a variable. Interpret the solution in the original context.</p> <p><b>7.2.4.2</b> Solve equations resulting from proportional relationships in various contexts.</p> <p><b>6.2.3.2</b> Solve equations involving positive rational numbers using number sense, properties of arithmetic and the idea of maintaining equality on both sides of the equation. Interpret a solution in the original context and assess the reasonableness of results.</p>

**An Alignment of the Minnesota Academic Standards for Mathematics 2007  
to Pearson High School Mathematics – Algebra 2 Common Core**

<p align="center"><b>Pearson High School Mathematics Common Core Algebra 2, ©2015</b></p>	<p align="center"><b>Minnesota Mathematics K-12 Academic Standards</b></p>
<p>1-5: Solving Inequalities</p>	<p><b>9.2.4</b> Represent real-world and mathematical situations using equations and inequalities involving linear, quadratic, exponential and nth root functions. Solve equations and inequalities symbolically and graphically. Interpret solutions in the original context.</p> <p><b>8.2.4.4</b> Use linear inequalities to represent relationships in various contexts.</p> <p><b>8.2.4.5</b> Solve linear inequalities using properties of inequalities. Graph the solutions on a number line.</p> <p><b>7.2.2.4</b> Represent real-world or mathematical situations using equations and inequalities involving variables and positive and negative rational numbers.</p>
<p>1-6: Absolute Value Equations and Inequalities</p>	<p><b>9.2.4.6</b> Represent relationships in various contexts using absolute value inequalities in two variables; solve them graphically.</p> <p><b>8.2.4.6</b> Represent relationships in various contexts with equations and inequalities involving the absolute value of a linear expression. Solve such equations and inequalities and graph the solutions on a number line.</p>
<p><b>Chapter 2</b></p>	
<p>2-1: Relations and Functions</p>	<p><b>9.2.2.1</b> Represent and solve problems in various contexts using linear and quadratic functions.</p> <p><b>9.2.1.4</b> Obtain information and draw conclusions from graphs of functions and other relations.</p>

**An Alignment of the Minnesota Academic Standards for Mathematics 2007  
to Pearson High School Mathematics – Algebra 2 Common Core**

<p align="center"><b>Pearson High School Mathematics Common Core Algebra 2, ©2015</b></p>	<p align="center"><b>Minnesota Mathematics K-12 Academic Standards</b></p>
<p>(Continued) 2-1: Relations and Functions</p>	<p><b>9.2.2</b> Recognize linear, quadratic, exponential and other common functions in real-world and mathematical situations; represent these functions with tables, verbal descriptions, symbols and graphs; solve problems involving these functions, and explain results in the original context.</p> <p><b>8.2.1.1</b> Understand that a function is a relationship between an independent variable and a dependent variable in which the value of the independent variable determines the value of the dependent variable. Use functional notation, such as <math>f(x)</math>, to represent such relationships.</p> <p><b>6.2.1.2</b> Represent the relationship between two varying quantities with function rules, graphs and tables; translate between any two of these representations.</p>
<p>2-2: Direct Variation</p>	<p><b>8.2.2.2</b> Identify graphical properties of linear functions including slopes and intercepts. Know that the slope equals the rate of change, and that the y-intercept is zero when the function represents a proportional relationship.</p> <p><b>7.2.1.2</b> Understand that the graph of a proportional relationship is a line through the origin whose slope is the unit rate (constant of proportionality). Know how to use graphing technology to examine what happens to a line when the unit rate is changed.</p> <p><b>7.2.2.1</b> Represent proportional relationships with tables, verbal descriptions, symbols, equations and graphs; translate from one representation to another. Determine the unit rate (constant of proportionality or slope) given any of these representations.</p> <p><b>7.2.2.2</b> Solve multi-step problems involving proportional relationships in numerous contexts.</p>

**An Alignment of the Minnesota Academic Standards for Mathematics 2007  
to Pearson High School Mathematics – Algebra 2 Common Core**

<p align="center"><b>Pearson High School Mathematics Common Core Algebra 2, ©2015</b></p>	<p align="center"><b>Minnesota Mathematics K-12 Academic Standards</b></p>
<p>(Continued) 2-2: Direct Variation</p>	<p><b>7.2.4.2</b> Solve equations resulting from proportional relationships in various contexts.</p> <p><b>7.2.2.1</b> Represent proportional relationships with tables, verbal descriptions, symbols, equations and graphs; translate from one representation to another. Determine the unit rate (constant of proportionality or slope) given any of these representations.</p>
<p>2-3: Linear Functions and Slope-Intercept Form</p>	<p><b>9.2.2.1</b> Represent and solve problems in various contexts using linear and quadratic functions.</p> <p><b>8.2.1.3</b> Understand that a function is linear if it can be expressed in the form <math>f(x) = mx + b</math> or if its graph is a straight line.</p> <p><b>8.2.2.2</b> Identify how coefficient changes in the equation <math>f(x) = mx + b</math> affect the graphs of linear functions. Know how to use graphing technology to examine these effects.</p> <p><b>8.2.4.3</b> Express linear equations in slope-intercept, point-slope and standard forms, and convert between these forms. Given sufficient information, find an equation of a line.</p>
<p>2-4: More about Linear Equations</p>	<p><b>8.2.4.1</b> Use linear equations to represent situations involving a constant rate of change, including proportional and non-proportional relationships.</p> <p><b>8.2.4.3</b> Express linear equations in slope-intercept, point-slope and standard forms, and convert between these forms. Given sufficient information, find an equation of a line.</p> <p><b>8.3.2.1</b> Understand and apply the relationships between the slopes of parallel lines and between the slopes of perpendicular lines. Dynamic graphing software may be used to examine these relationships.</p>

**An Alignment of the Minnesota Academic Standards for Mathematics 2007  
to Pearson High School Mathematics – Algebra 2 Common Core**

<p align="center"><b>Pearson High School Mathematics Common Core Algebra 2, ©2015</b></p>	<p align="center"><b>Minnesota Mathematics K-12 Academic Standards</b></p>
<p>(Continued) 2-4: More about Linear Equations</p>	<p><b>8.3.2.3</b> Given a line on a coordinate system and the coordinates of a point not on the line, find lines through that point that are parallel and perpendicular to the given line, symbolically and graphically.</p>
<p>2-5: Using Linear Models</p>	<p><b>9.2.2.1</b> Represent and solve problems in various contexts using linear and quadratic functions.</p> <p><b>8.2.1.2</b> Use linear functions to represent relationships in which changing the input variable by some amount leads to a change in the output variable that is a constant times that amount.</p> <p><b>8.2.2.1</b> Represent linear functions with tables, verbal descriptions, symbols, equations and graphs; translate from one representation to another.</p>
<p>2-6: Families of Functions</p>	<p><b>9.2.2</b> Recognize linear, quadratic, exponential and other common functions in real-world and mathematical situations; represent these functions with tables, verbal descriptions, symbols and graphs; solve problems involving these functions, and explain results in the original context.</p> <p><b>9.2.2.1</b> Represent and solve problems in various contexts using linear and quadratic functions.</p> <p><b>8.2.1.2</b> Use linear functions to represent relationships in which changing the input variable by some amount leads to a change in the output variable that is a constant times that amount.</p> <p><b>8.2.2.1</b> Represent linear functions with tables, verbal descriptions, symbols, equations and graphs; translate from one representation to another.</p> <p><b>8.2.2.2</b> Identify how coefficient changes in the equation <math>f(x) = mx + b</math> affect the graphs of linear functions. Know how to use graphing technology to examine these effects.</p>

to Pearson High School Mathematics – Algebra 2 Common Core**

Pearson High School Mathematics Common Core Algebra 2, ©2015	Minnesota Mathematics K-12 Academic Standards
2-7: Absolute Value Functions and Graphs	<p><b>9.2.3.1</b> Evaluate polynomial and rational expressions and expressions containing radicals and absolute values at specified points in their domains.</p> <p><b>8.2.4.6</b> Represent relationships in various contexts with equations and inequalities involving the absolute value of a linear expression. Solve such equations and inequalities and graph the solutions on a number line.</p>
2-8: Two Variable Inequalities	<p><b>9.2.4</b> Represent real-world and mathematical situations using equations and inequalities involving linear, quadratic, exponential and nth root functions. Solve equations and inequalities symbolically and graphically. Interpret solutions in the original context.</p>
<b>Chapter 3</b>	
3-1: Solving Systems Using Tables and Graphs	<p><b>8.2.4.7</b> Represent relationships in various contexts using systems of linear equations. Solve systems of linear equations in two variables symbolically, graphically and numerically.</p> <p><b>8.2.4.8</b> Understand that a system of linear equations may have no solution, one solution, or an infinite number of solutions. Relate the number of solutions to pairs of lines that are intersecting, parallel or identical. Check whether a pair of numbers satisfies a system of two linear equations in two unknowns by substituting the numbers into both equations.</p>
3-2: Solving Systems Algebraically	<p><b>8.2.4.7</b> Represent relationships in various contexts using systems of linear equations. Solve systems of linear equations in two variables symbolically, graphically and numerically.</p> <p><b>8.2.4.8</b> Understand that a system of linear equations may have no solution, one solution, or an infinite number of solutions. Relate the number of solutions to pairs of lines that are intersecting, parallel or identical. Check whether a pair of numbers satisfies a system of two linear equations in two unknowns by substituting the numbers into both equations.</p>

**An Alignment of the Minnesota Academic Standards for Mathematics 2007  
to Pearson High School Mathematics – Algebra 2 Common Core**

Pearson High School Mathematics Common Core Algebra 2, ©2015	Minnesota Mathematics K-12 Academic Standards
3-3: Systems of Inequalities	<p><b>9.2.4.4</b> Represent relationships in various contexts using systems of linear inequalities; solve them graphically. Indicate which parts of the boundary are included in and excluded from the solution set using solid and dotted lines.</p>
3-4: Linear Programming	<p><b>9.2.4.4</b> Represent relationships in various contexts using systems of linear inequalities; solve them graphically. Indicate which parts of the boundary are included in and excluded from the solution set using solid and dotted lines.</p> <p><b>9.2.4.5</b> Solve linear programming problems in two variables using graphical methods.</p>
3-5: Systems With Three Variables	The Minnesota standards do not refer to systems with three variables.
3-6: Solving Systems Using Matrices	The Minnesota standards do not refer to solving systems using matrices.
<b>Chapter 4</b>	
4-1: Quadratic Functions and Transformations	<p><b>9.2.1.5</b> Identify the vertex, line of symmetry and intercepts of the parabola corresponding to a quadratic function, using symbolic and graphical methods, when the function is expressed in the form <math>f(x) = ax^2 + bx + c</math>, in the form <math>f(x) = a(x - h)^2 + k</math>, or in factored form.</p> <p><b>9.2.1.9</b> Determine how translations affect the symbolic and graphical forms of a function. Know how to use graphing technology to examine translations.</p> <p><b>9.2.2.1</b> Represent and solve problems in various contexts using linear and quadratic functions.</p> <p><b>9.2.2.3</b> Sketch graphs of linear, quadratic and exponential functions, and translate between graphs, tables and symbolic representations. Know how to use graphing technology to graph these functions.</p>

**An Alignment of the Minnesota Academic Standards for Mathematics 2007  
to Pearson High School Mathematics – Algebra 2 Common Core**

<p align="center"><b>Pearson High School Mathematics Common Core Algebra 2, ©2015</b></p>	<p align="center"><b>Minnesota Mathematics K-12 Academic Standards</b></p>
<p>(Continued) 4-1: Quadratic Functions and Transformations</p>	<p><b>9.2.4.1</b> Represent relationships in various contexts using quadratic equations and inequalities. Solve quadratic equations and inequalities by appropriate methods including factoring, completing the square, graphing and the quadratic formula. Find non-real complex roots when they exist. Recognize that a particular solution may not be applicable in the original context. Know how to use calculators, graphing utilities or other technology to solve quadratic equations and inequalities.</p>
<p>4-2: Standard Form of a Quadratic Function</p>	<p><b>9.2.1.5</b> Identify the vertex, line of symmetry and intercepts of the parabola corresponding to a quadratic function, using symbolic and graphical methods, when the function is expressed in the form <math>f(x) = ax^2 + bx + c</math>, in the form <math>f(x) = a(x - h)^2 + k</math>, or in factored form.</p>
<p>4-3: Modeling With Quadratic Functions</p>	<p><b>9.2.2.1</b> Represent and solve problems in various contexts using linear and quadratic functions.</p> <p><b>9.2.4.1</b> Represent relationships in various contexts using quadratic equations and inequalities. Solve quadratic equations and inequalities by appropriate methods including factoring, completing the square, graphing and the quadratic formula. Find non-real complex roots when they exist. Recognize that a particular solution may not be applicable in the original context. Know how to use calculators, graphing utilities or other technology to solve quadratic equations and inequalities.</p>
<p>4-4: Factoring Quadratic Expressions</p>	<p><b>9.2.4.1</b> Represent relationships in various contexts using quadratic equations and inequalities. Solve quadratic equations and inequalities by appropriate methods including factoring, completing the square, graphing and the quadratic formula. Find non-real complex roots when they exist. Recognize that a particular solution may not be applicable in the original context. Know how to use calculators, graphing utilities or other technology to solve quadratic equations and inequalities.</p>

to Pearson High School Mathematics – Algebra 2 Common Core**

Pearson High School Mathematics Common Core Algebra 2, ©2015	Minnesota Mathematics K-12 Academic Standards
<b>Chapter 6</b>	
6-1: Roots and Radical Expressions	<p><b>9.2.3.1</b> Evaluate polynomial and rational expressions and expressions containing radicals and absolute values at specified points in their domains.</p> <p><b>9.2.3.6</b> Apply the properties of positive and negative rational exponents to generate equivalent algebraic expressions, including those involving nth roots.</p> <p><b>8.2.3.1</b> Evaluate algebraic expressions, including expressions containing radicals and absolute values, at specified values of their variables.</p>
6-2: Multiplying and Dividing Radical Expressions	<p><b>9.2.3</b> Generate equivalent algebraic expressions involving polynomials and radicals; use algebraic properties to evaluate expressions.</p> <p><b>9.2.3.6</b> Apply the properties of positive and negative rational exponents to generate equivalent algebraic expressions, including those involving nth roots. For example: <math>\sqrt{2} \times \sqrt{7} = 2^{1/2} \times 7^{1/2} = 14^{1/2} = \sqrt{14}</math>. Rules for computing directly with radicals may also be used: <math>3\sqrt{2} \times 3\sqrt{x} = 3\sqrt{2x}</math>.</p>
6-3: Binomial Radical Expressions	The Minnesota standards do not refer to binomial radical expressions.
6-4: Rational Exponents	<p><b>9.2.3.6</b> Apply the properties of positive and negative rational exponents to generate equivalent algebraic expressions, including those involving nth roots. For example: <math>\sqrt{2} \times \sqrt{7} = 2^{1/2} \times 7^{1/2} = 14^{1/2} = \sqrt{14}</math>. Rules for computing directly with radicals may also be used: <math>3\sqrt{2} \times 3\sqrt{x} = 3\sqrt{2x}</math>.</p>
6-5 Solving Square Root and Other Radical Equations	<b>9.2.4.7</b> Solve equations that contain radical expressions. Recognize that extraneous solutions may arise when using symbolic methods.

**An Alignment of the Minnesota Academic Standards for Mathematics 2007  
to Pearson High School Mathematics – Algebra 2 Common Core**

Pearson High School Mathematics Common Core Algebra 2, ©2015	Minnesota Mathematics K-12 Academic Standards
6-6: Function Operations	<p>The Minnesota standards do not refer specifically to function operations.</p> <p><b>9.2.3.2</b> Add, subtract and multiply polynomials; divide a polynomial by a polynomial of equal or lower degree.</p> <p><b>9.2.3.4</b> Add, subtract, multiply, divide and simplify algebraic fractions.</p>
6-7: Inverse Relations and Functions	The Minnesota standards do not refer to inverse relations and functions.
6-8 Graphing Radical Functions	The Minnesota standards do not refer specifically to graphing radical functions.
<b>Chapter 7</b>	
7-1: Exploring Exponential Models	<p><b>9.2.1.7</b> Understand the concept of an asymptote and identify asymptotes for exponential functions and reciprocals of linear functions, using symbolic and graphical methods.</p> <p><b>9.2.2.2</b> Represent and solve problems in various contexts using exponential functions, such as investment growth, depreciation and population growth.</p> <p><b>9.2.2.3</b> Sketch graphs of linear, quadratic and exponential functions, and translate between graphs, tables and symbolic representations. Know how to use graphing technology to graph these functions.</p> <p><b>9.2.4.2</b> Represent relationships in various contexts using equations involving exponential functions; solve these equations graphically or numerically. Know how to use calculators, graphing utilities or other technology to solve these equations.</p>
7-2: Properties of Exponential Functions	<p><b>9.2.1.7</b> Understand the concept of an asymptote and identify asymptotes for exponential functions and reciprocals of linear functions, using symbolic and graphical methods.</p>

Pearson High School Mathematics Common Core Algebra 2, ©2015	Minnesota Mathematics K-12 Academic Standards
(Continued) 7-2: Properties of Exponential Functions	<p><b>9.2.2.2</b> Represent and solve problems in various contexts using exponential functions, such as investment growth, depreciation and population growth.</p> <p><b>9.2.2.3</b> Sketch graphs of linear, quadratic and exponential functions, and translate between graphs, tables and symbolic representations. Know how to use graphing technology to graph these functions.</p> <p><b>9.2.4.2</b> Represent relationships in various contexts using equations involving exponential functions; solve these equations graphically or numerically. Know how to use calculators, graphing utilities or other technology to solve these equations.</p>
7-3: Logarithmic Functions as Inverses	The Minnesota standards do not refer to logarithmic functions.
7-4: Properties of Logarithms	The Minnesota standards do not refer to logarithms.
7-5: Exponential and Logarithmic Equations	<p>The Minnesota standards do not refer to logarithmic equations.</p> <p><b>9.2.4.2</b> Represent relationships in various contexts using equations involving exponential functions; solve these equations graphically or numerically. Know how to use calculators, graphing utilities or other technology to solve these equations.</p>
7-6: Natural Logarithms	The Minnesota standards do not refer to natural logarithms.
<b>Chapter 8</b>	
8-1: Inverse Variation	<p><b>7.2.1.1</b> Understand that a relationship between two variables, <math>x</math> and <math>y</math>, is proportional if it can be expressed in the form <math>y/x = k</math> or <math>y = kx</math>. Distinguish proportional relationships from other relationships, including inversely proportional relationships (<math>xy = k</math> or <math>y = k/x</math>).</p>
8-2: The Reciprocal Function Family	The Minnesota standards do not refer to the reciprocal function family $f(x) = 1/x$ .
8-3: Rational Functions and Their Graphs	The Minnesota standards do not refer to rational functions and their graphs.

**An Alignment of the Minnesota Academic Standards for Mathematics 2007  
to Pearson High School Mathematics – Algebra 2 Common Core**

Pearson High School Mathematics Common Core Algebra 2, ©2015	Minnesota Mathematics K-12 Academic Standards
8-4: Rational Expressions	<b>9.2.3.1</b> Evaluate polynomial and rational expressions and expressions containing radicals and absolute values at specified points in their domains.
8-5: Adding and Subtracting Rational Expressions	The Minnesota standards do not refer specifically to adding and subtracting rational expressions.
8-6: Solving Rational Equations	The Minnesota standards do not refer to solving rational equations.
<b>Chapter 9</b>	
9-1: Mathematical Patterns	<b>2.2.1.1</b> Identify, create and describe simple number patterns involving repeated addition or subtraction, skip counting and arrays of objects such as counters or tiles. Use patterns to solve problems in various contexts.  <b>1.2.1.1</b> Create simple patterns using objects, pictures, numbers and rules. Identify possible rules to complete or extend patterns. Patterns may be repeating, growing or shrinking. Calculators can be used to create and explore patterns.
9-2: Arithmetic Sequences	<b>8.2.1.4</b> Understand that an arithmetic sequence is a linear function that can be expressed in the form $f(x) = mx + b$ , where $x = 0, 1, 2, 3, \dots$  <b>8.2.2.4</b> Represent arithmetic sequences using equations, tables, graphs and verbal descriptions, and use them to solve problems.
9-3: Geometric Sequences	<b>9.2.2.4</b> Express the terms in a geometric sequence recursively and by giving an explicit (closed form) formula, and express the partial sums of a geometric series recursively.

**An Alignment of the Minnesota Academic Standards for Mathematics 2007  
to Pearson High School Mathematics – Algebra 2 Common Core**

<p align="center"><b>Pearson High School Mathematics Common Core Algebra 2, ©2015</b></p>	<p align="center"><b>Minnesota Mathematics K-12 Academic Standards</b></p>
<p>(Continued) 9-3: Geometric Sequences</p>	<p><b>9.2.2.5</b> Recognize and solve problems that can be modeled using finite geometric sequences and series, such as home mortgage and other compound interest examples. Know how to use spreadsheets and calculators to explore geometric sequences and series in various contexts.</p> <p><b>8.2.1.5</b> Understand that a geometric sequence is a non-linear function that can be expressed in the form <math>f(x) = ab^x</math>, where <math>x = 0, 1, 2, 3, \dots</math></p> <p><b>8.2.2.5</b> Represent geometric sequences using equations, tables, graphs and verbal descriptions, and use them to solve problems.</p>
<p>9-4: Arithmetic Series</p>	<p>The Minnesota standards do not refer specifically to arithmetic series.</p>
<p>9-5: Geometric Series</p>	<p><b>9.2.2.4</b> Express the terms in a geometric sequence recursively and by giving an explicit (closed form) formula, and express the partial sums of a geometric series recursively.</p> <p><b>9.2.2.5</b> Recognize and solve problems that can be modeled using finite geometric sequences and series, such as home mortgage and other compound interest examples. Know how to use spreadsheets and calculators to explore geometric sequences and series in various contexts.</p>
<p><b>Chapter 10</b></p>	
<p>10-1: Exploring Conic Sections</p>	<p>The Minnesota standards do not refer specifically to conic sections (other than parabolas and circles).</p> <p><b>9.2.1.5</b> Identify the vertex, line of symmetry and intercepts of the parabola corresponding to a quadratic function, using symbolic and graphical methods, when the function is expressed in the form <math>f(x) = ax^2 + bx + c</math>, in the form <math>f(x) = a(x - h)^2 + k</math>, or in factored form.</p>

**An Alignment of the Minnesota Academic Standards for Mathematics 2007  
to Pearson High School Mathematics – Algebra 2 Common Core**

<p align="center"><b>Pearson High School Mathematics Common Core Algebra 2, ©2015</b></p>	<p align="center"><b>Minnesota Mathematics K-12 Academic Standards</b></p>
<p>(Continued) 10-1: Exploring Conic Sections</p>	<p><b>9.2.1.9</b> Determine how translations affect the symbolic and graphical forms of a function. Know how to use graphing technology to examine translations.</p> <p><b>9.2.2.3</b> Sketch graphs of linear, quadratic and exponential functions, and translate between graphs, tables and symbolic representations. Know how to use graphing technology to graph these functions.</p> <p><b>9.3.4.5</b> Know the equation for the graph of a circle with radius <math>r</math> and center <math>(h, k)</math>, <math>(x - h)^2 + (y - k)^2 = r^2</math>, and justify this equation using the Pythagorean Theorem and properties of translations.</p>
<p>10-2: Parabolas</p>	<p><b>9.2.1.5</b> Identify the vertex, line of symmetry and intercepts of the parabola corresponding to a quadratic function, using symbolic and graphical methods, when the function is expressed in the form <math>f(x) = ax^2 + bx + c</math>, in the form <math>f(x) = a(x - h)^2 + k</math>, or in factored form.</p> <p><b>9.2.1.9</b> Determine how translations affect the symbolic and graphical forms of a function. Know how to use graphing technology to examine translations.</p> <p><b>9.2.2.3</b> Sketch graphs of linear, quadratic and exponential functions, and translate between graphs, tables and symbolic representations. Know how to use graphing technology to graph these functions.</p>
<p>10-3: Circles</p>	<p><b>9.3.4.5</b> Know the equation for the graph of a circle with radius <math>r</math> and center <math>(h, k)</math>, <math>(x - h)^2 + (y - k)^2 = r^2</math>, and justify this equation using the Pythagorean Theorem and properties of translations.</p>

to Pearson High School Mathematics – Algebra 2 Common Core**

<p align="center"><b>Pearson High School Mathematics Common Core Algebra 2, ©2015</b></p>	<p align="center"><b>Minnesota Mathematics K-12 Academic Standards</b></p>
<p>(Continued) 11-2: Probability</p>	<p><b>6.4.1.2</b> Determine the probability of an event using the ratio between the size of the event and the size of the sample space; represent probabilities as percents, fractions and decimals between 0 and 1 inclusive. Understand that probabilities measure likelihood.</p> <p><b>6.4.1.3</b> Perform experiments for situations in which the probabilities are known, compare the resulting relative frequencies with the known probabilities; know that there may be differences.</p> <p><b>6.4.1.4</b> Calculate experimental probabilities from experiments; represent them as percents, fractions and decimals between 0 and 1 inclusive. Use experimental probabilities to make predictions when actual probabilities are unknown.</p>
<p>11-3: Probability of Multiple Events</p>	<p><b>9.4.3.5</b> Apply probability concepts such as intersections, unions and complements of events, and conditional probability and independence, to calculate probabilities and solve problems.</p> <p><b>9.4.3.6</b> Describe the concepts of intersections, unions and complements using Venn diagrams. Understand the relationships between these concepts and the words AND, OR, NOT, as used in computerized searches and spreadsheets.</p> <p><b>9.4.3.7</b> Understand and use simple probability formulas involving intersections, unions and complements of events.</p>
<p>11-4: Conditional Probability</p>	<p><b>9.4.3.9</b> Use the relationship between conditional probabilities and relative frequencies in contingency tables.</p>

to Pearson High School Mathematics – Algebra 2 Common Core**

<p align="center"><b>Pearson High School Mathematics Common Core Algebra 2, ©2015</b></p>	<p align="center"><b>Minnesota Mathematics K-12 Academic Standards</b></p>
<p>11-5: Probability Models</p>	<p><b>9.4.3.2</b> Calculate experimental probabilities by performing simulations or experiments involving a probability model and using relative frequencies of outcomes.</p> <p><b>9.4.3.3</b> Understand that the Law of Large Numbers expresses a relationship between the probabilities in a probability model and the experimental probabilities found by performing simulations or experiments involving the model.</p> <p><b>9.4.3.4</b> Use random numbers generated by a calculator or a spreadsheet, or taken from a table, to perform probability simulations and to introduce fairness into decision making.</p> <p><b>9.4.3.8</b> Apply probability concepts to real-world situations to make informed decisions.</p> <p><b>7.4.3.1</b> Use random numbers generated by a calculator or a spreadsheet or taken from a table to simulate situations involving randomness, make a histogram to display the results, and compare the results to known probabilities.</p>
<p>11-6: Analyzing Data</p>	<p><b>9.4.1.1</b> Describe a data set using data displays, including box-and-whisker plots; describe and compare data sets using summary statistics, including measures of center, location and spread. Measures of center and location include mean, median, quartile and percentile. Measures of spread include standard deviation, range and inter-quartile range. Know how to use calculators, spreadsheets or other technology to display data and calculate summary statistics.</p> <p><b>9.4.1.2</b> Analyze the effects on summary statistics of changes in data sets.</p>

**An Alignment of the Minnesota Academic Standards for Mathematics 2007  
to Pearson High School Mathematics – Algebra 2 Common Core**

<p align="center"><b>Pearson High School Mathematics Common Core Algebra 2, ©2015</b></p>	<p align="center"><b>Minnesota Mathematics K-12 Academic Standards</b></p>
<p>(Continued) 11-6: Analyzing Data</p>	<p><b>9.4.2.1</b> Evaluate reports based on data published in the media by identifying the source of the data, the design of the study, and the way the data are analyzed and displayed. Show how graphs and data can be distorted to support different points of view. Know how to use spreadsheet tables and graphs or graphing technology to recognize and analyze distortions in data displays.</p> <p><b>9.4.2.2</b> Identify and explain misleading uses of data; recognize when arguments based on data confuse correlation and causation.</p>
<p>11-7: Standard Deviation</p>	<p><b>9.4.1.1</b> Describe a data set using data displays, including box-and-whisker plots; describe and compare data sets using summary statistics, including measures of center, location and spread. Measures of center and location include mean, median, quartile and percentile. Measures of spread include standard deviation, range and inter-quartile range. Know how to use calculators, spreadsheets or other technology to display data and calculate summary statistics.</p> <p><b>9.4.1.2</b> Analyze the effects on summary statistics of changes in data sets.</p>
<p>11-8 Samples and Surveys</p>	<p><b>9.4.2.3</b> Design simple experiments and explain the impact of sampling methods, bias and the phrasing of questions asked during data collection.</p>
<p>11-9: Binomial Distributions</p>	<p>The Minnesota standards do not refer to binomial distributions.</p>
<p>11-10: Normal Distributions</p>	<p><b>9.4.1.4</b> Use the mean and standard deviation of a data set to fit it to a normal distribution (bell-shaped curve) and to estimate population percentages. Recognize that there are data sets for which such a procedure is not appropriate. Use calculators, spreadsheets and tables to estimate areas under the normal curve.</p>
